Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Whitney'609 or '140 in view of Kinsley'675.

The applied Whitney'609 or "140 references teach that it is known in the art to make articles having metallic particles dispersed over at least one surface of the article in uniform fusion and metallic particles being bound in the article. The applied references teach that particles may be aluminum, have silver color, may be coated and that color pigments may be included in the composition. Also, the sizes and shapes of the metallic particles have been disclosed in the Whitney patents. See Whitney'609 column 1, lines 19-50, column 2, lines 55-67, column 3, lines 5-55, column 10, lines 30-35, column 12, lines 47-60, column 13, lines 12-20.

The applied Whitney patents disclose that cellulose derivatives may be used in their compositions. The applied Whitney patents do not teach specifically that metallic particles may be included in paper product. However, Kinsley'675 teaches that it is well known in the art to make paper sheet with metal fiber or metal powder contained therein. The Kinsley'675 teaches that such paper is made by conventional paper making process wherein paper pulp mix is prepared, metal particles are added, web is formed and then pressing and drying is follows. See Kinsley'675 Abstract, column 2, lines 45-55, column 3, lines 10-45, column 4, lines 30-67, column 5, lines 1-32,

It would have been obvious to one having ordinary skill in the art at the time of the invention to use teachings of Kinsley'675 regarding paper making technology in Whitney inventions and make paper sheet containing metallic particles since such would improve marketability and widen number of substrates available.

Claim Rejections - 35 USC § 112

3. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically, term such as “uniform but random fashion” is not clear; uniform or random with respect to what?.
